

FREQUENTLY ASKED QUESTIONS

Where should I use RENEW?

RENEW is specifically formulated for use in car wash tunnels and bays. It is safe for use on multiple surfaces found in these areas including painted block, brick, FRP, tile, PVC panels and more.

How is RENEW different than other car wash cleaners?

RENEW uses a state-of-the-art acid replacement technology that significantly increases employee safety while remaining effective against the difficult cleaning challenges found in the car wash environment.

What is acid replacement technology?

Acid replacement uses a unique blend of chemicals to reduce the danger to humans while remaining effective against the heavy dirt and buildup found in car washes.

Is RENEW safe for employees?

Although PPE is still required, it is safe enough to not need the extreme PPE of hydrofluoric acid cleaners. No hazmat suits are required when using RENEW.

What PPE should I use?

When using RENEW, we recommend wearing gloves and goggles during the application and cleaning process.

Is RENEW safe for water reclamation systems?

Yes. The formulation is not only safe for employees, it also has no negative impacts on the delicate chemistry of reclaim systems.

How often should I clean my car wash?

It's recommended that car wash tunnels be cleaned every 2 to 4 weeks or as needed, depending on how dirty the area looks.

What do I do if my walls still look dirty?

All car washes will have varying levels of dirt, grime and waxy buildup. Some areas of buildup, especially areas that have not been properly cleaned recently, may need additional cleaning. If you notice a particularly dirty area, reapply RENEW as needed.
