## CAF Launches RENEW Car Wash™ Tunnel and Bay Cleaner

*Car Wash Tunnel Cleaning is Now Safer and More Effective*

**Maple Valley, WA, June 1, 2020 – RENEW Car Wash™** Tunnel and Bay Cleaner is the safest and most effective way to clean the hard surfaces in car wash tunnels.

[RENEW Car Wash Tunnel and Bay Cleaner](#) takes a once dangerous task of cleaning car wash locations and makes it safe and easy. The RENEW proprietary formula was specifically developed with high-traffic car washes and strict environmental concerns in mind. Using advanced acid replacement technology, [CAF Outdoor Cleaning](#) is making the cleaning process more effective, all while keeping employees safe. RENEW removes built-up dirt, scum, hard water, mold and mildew from car wash tunnels and is safe for use on painted block, PVC panels, FRP, tile and brick.

RENEW allows employees to clean car wash tunnels without the need for expensive and invasive PPE. With RENEW it is recommended that employees wear gloves and goggles, not the bulky hazmat suits that are required with the use of hydrofluoric acid. RENEW is also reclaim safe and will not harm or negatively impact the delicate chemistry of a reclaim system – saving additional time, money and resources.

Once applied, RENEW takes just 3 minutes to remove dirt and grime from tunnel surfaces. It's perfect for use in multiple car wash locations including C-Stores, fueling locations, truck stops, rental car facilities, vehicle dealerships and any other location with a car wash tunnel.

Car washes are inherently dirty due to the nature of how they operate. Built up dirt, soap scum, hard water and other materials accumulate on surfaces and in reclaim systems. To combat these car wash tunnel cleaning challenges, the industry has turned to extremely unsafe chemicals like hydrofluoric acid, which can be deadly in small concentrations. Numerous people have been injured or killed using hydrofluoric acid in and outside of the carwash industry. Alternative methods for cleaning car wash tunnels include outsourcing cleaning tasks to specialized tunnel cleaning companies. However, this can be time consuming, costly and may still use hydrofluoric acid.

Other cleaning methods – manual scrubbing, corrosive chemicals and outsourced labor – will undoubtedly cost users more in the long run. Additionally, competitor products are extremely dangerous and less effective than the active ingredients found in RENEW. If you're looking for a safe, effective way to clean your car wash tunnels, RENEW is the only way to go.

RENEW Car Wash Tunnel and Bay Cleaner:

- Safe – No hazmat suit required
- Acid Free – No hydrofluoric acid
- Value – Saves on labor and costs
- Eliminates – Soap scum, dirt & hard water
- Reclaim Safe – Helps with odor control

###

CAF is the industry leader in supplying innovative cleaning products and solutions that help stores differentiate from the competition by providing a 5-star customer experience at the pumps. In addition to superior cleaning products, CAF also provides training and ongoing execution support to **over 30,000 sites** in North America and Europe. CAF saves retailers time and money -- improving the customer experience while they fuel and *driving inside sales*. **Simply put: Clean stores sell more.** Visit [www.mycaf.com](http://www.mycaf.com) for more information as well as full product descriptions.
